

Campus Security and Information Access Policy

1. Campus Security Policy

All students, faculty members and staff must follow campus security rules. Unauthorized access to computer laboratories, offices, servers and restricted areas is prohibited. Security incidents must be reported through the official campus ticket system.

2. Laboratory Access Rules

Students may enter computer laboratories only during authorized hours or when permission has been granted by the responsible faculty member. Students must use their assigned identification credentials. Sharing access credentials with another person is prohibited.

3. Student ID Policy

Students must carry a valid student identification card while inside the campus. If an ID card is lost, damaged or not functioning, the student should report the issue to the administration department and create a support ticket.

4. Incident Reporting Procedure

Security incidents, suspicious activity, unauthorized access and technical problems should be reported through the campus ticket management system. The ticket should contain a clear description of the incident and relevant details.

5. Ticket Escalation Policy

Tickets marked as high priority or tickets showing repeated incidents may require escalation to the responsible security or administration team. The escalation level may be determined using ticket priority, previous incidents and ticket age.

6. Information Access Policy

Campus ticket information must only be provided to the authorized user associated with the ticket. Users must provide a valid Ticket ID and User ID before accessing ticket-specific information. Unauthorized users must be denied access.

7. AI Assistant Guidelines

The AI assistant should provide information based only on authorized ticket information and relevant campus policies. The assistant should not disclose private information belonging to another user.
